

linux

OS

A linux guide for beginners...

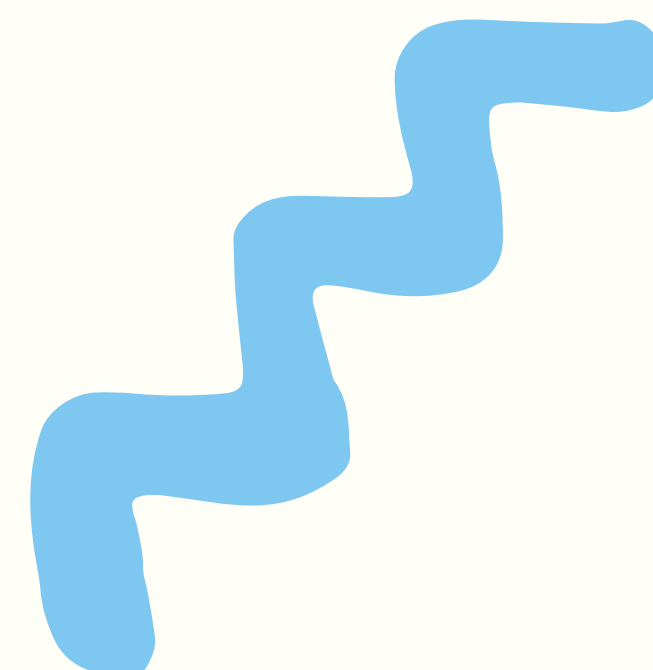

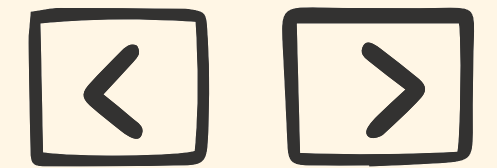

NISCHAL

Operating System

The software that lets you interact with your computer, like clicking icons, opening programs, and saving files, making it possible to do everything from watching videos to browsing the web. In simpler terms, think of it as the boss that tells your computer what to do, helping you get things done without having to worry about the technical details.

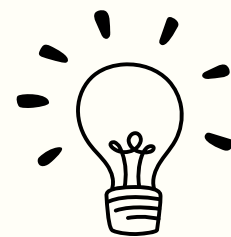

An operating system is like the captain of a ship, guiding and managing all the different parts of your computer so they work together smoothly

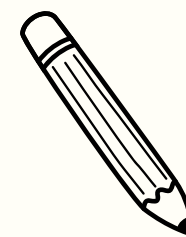

Operating system

Windows

This is the system most people are familiar with. It's what you see on most PCs and laptops when you start them up.

MacOS

If you're using a Mac computer, you're using macOS. It's designed by Apple specifically for their computers.

Linux

It's like Windows or macOS, but it's free and open-source, which means people can change and improve it however they want.

LINUX

& WHY???

Linux is like a superhero for your computer, except it's free and open-source! It's not made by just one company; instead, it's built by people all over the world who want to make computing better for everyone.

It's Free: No need to spend money on software – Linux won't cost you a dime!

It's Safe: Linux is like having a bodyguard for your computer, keeping out the bad stuff so you can browse worry-free.

It's Reliable: Unlike some operating systems that throw tantrums, Linux is super dependable, so you can trust it to work smoothly.

You're in Charge: With Linux, you're the boss. Customize it however you like and make it your own.

Ready to learn more about this awesome system? Let's dive in!

why don't everybody use it???

Why

not

windows

why are
there more
users in
windows???

WINDOWS OVER LINUX

Here are some of the reasons why people might choose windows over linux :

User friendliness

For a average computer user, windows remain more user friendly. its graphical user interface(GUI) makes it easy to navigate.

Gaming

Eventhogh the gaming sector of linux has improved, windows still dominates this field.

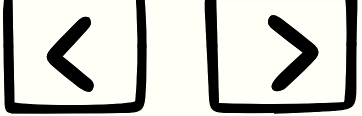

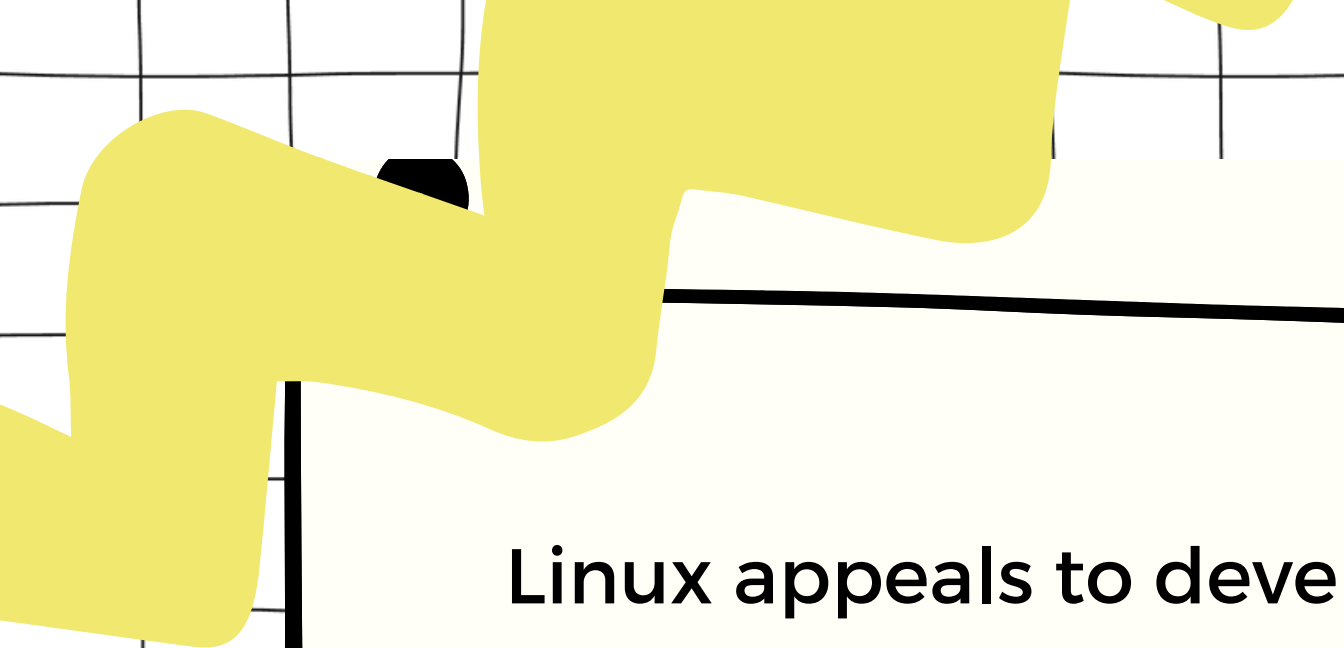

Work Environment

In many workplaces, windows is the standard operating system. Employees are often required to use windows for compability.

Support

Many commercial software applications and games are primarily developed for Windows,.

Linux appeals to developers, server administrators, students, privacy-conscious users, and those with older hardware due to its flexibility, stability, and open-source nature. It provides a powerful environment for software development, robust server capabilities, and is often used in educational settings.

Additionally, its strong security features, lightweight distributions, and cost-effectiveness make it attractive to privacy-conscious users, hobbyists, and organizations seeking alternatives to proprietary systems.
